

Hydrangea paniculata ‘Mid Late Summer’ Acc: 802

Synonyms: No synonyms found.

Awards: No awards found.

Patents: No patents found.

Description:

Height x Width: 2.5 x 2 m

Habit: Upright habit and arching

Stems & leaves: Strong reddish-brown upright arching stems and mid-green, smooth, glossy leaves that are quite attractive.

Panicles: Short rounded open panicles 250 x 150mm, of creamy white fertile flowers and around 40% cover of large white sterile flowers that hang down at the end of the season showing a dull pinkish red on both sides of the sepals at the end of the season. There is some pink in the buds of both types of flower.

Overall assessment: At the end of the season this is one of the better of the older cultivars with small loose open panicles with sepals that droop showing their red reverse side. At the RHS & European Trials at Wisley, their report said: ‘Good’.

Origins: Bred in 1990 by Pieter Zwijnenburg, in Boskoop in the Netherlands.
