

Hydrangea paniculata 'Bobo' ^{PBR} Acc 1219

Synonyms: 'ILVOBo' (PBR)

Awards: No awards found.

Patents: US Patent: PP 22,782 (2012)., PLP 12928264, Start: 2012-06-12

PBR: 20101515, Start: 2013-07-29, & 10-7079, Start: 2014-09-29

Description:

Height x Width: 1 x 1.5 m

Habit: One of the smallest of the paniculata cultivars, barley making a 1 m mound.

Stems & leaves: Small leaves that are obscured by the prolific flowers.

Panicles: Medium sized (20 x 14 cm) but dense upright panicles produced in profusion as to totally obscure the leaves. The individual sterile flowers are small but give a 95% cover of the panicle. They start out creamy white before turning pink and finally brown with age.

Overall assessment: Perhaps too dwarf. If you only have space for plant this small perhaps it may be better to choose another type of plant. The panicles do look good when at their best but they do not age as well as some other cultivars.

Origins: Bred in 2003 by Johan Van Huylenbroeck of Ghent University, in Belgium, from open pollination between 'Pink Diamond' as the female parent and an unknown paniculata as the male parent.
